

# VPN Client Connection – MAC Computers

---

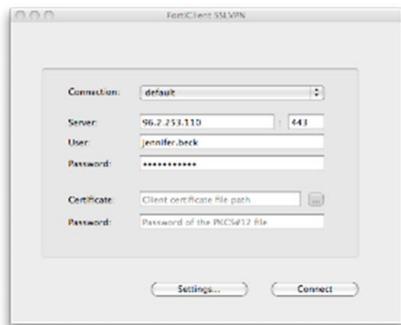

South Dakota Achieve has implemented a new Firewall Appliance to better secure our data and network. Part of this implementation will require a change to the process for connecting to Remote Desktop from any computer outside of any the Achieve Locations.

**These instructions must be completed while logged out of Remote Desktop.**

## Client Installation

The Client Installation process only needs to be performed one time per computer.

1. Using your browser, enter <https://www.forticlient.com/downloads> into the address field.
2. Click on the link to download for Max OS.
3. Once the program is installed, run the program. You will see a screen similar to below:

Enter the following information:

Server: 96.2.253.110:443

Username: same as your computer/email username – do not enter @lifescapesd.org

Password: same as your computer/email password.

4. Click on Connect to launch connect the VPN connection.
5. Once it shows connected or “tunnel running”, you may connect to your remote desktop as normal.
6. **REMOTE DESKTOP WILL NOT LOAD AUTOMATICALLY.** When logging into Remote Desktop, you must change the actual remote desktop addresses as shown below:  
titan.lifescapesd.org
7. Once you have logged off of remote desktop, disconnect the VPN connection.
